

STRUCTIONAL DESIGN PLAN: DATA COMPLIANCE MATRIX

PROJECT OVERVIEW

- **Target Audience:** Cross-Functional Management Teams
- **Authoring Tools:** Articulate Rise 360 / Storyline / Figma
- **Instructional Framework:** ADDIE / Backward Design / Action Mapping
- **Lead Instructional Designer:** Aseel Refai

1. BUSINESS PROBLEM & PERFORMANCE GAP

An internal operations audit revealed an increase in data governance liabilities due to managers mishandling cross-functional feedback and failing to execute compliance protocols correctly. The root cause was identified as text-heavy, static standard operating procedures (SOPs) that failed to prepare leadership teams for high-pressure, real-time decision-making.

2. TARGET AUDIENCE & BEHAVIORAL NEEDS ASSESSMENT

To target this cohort effectively, a detailed behavioral needs assessment was conducted to differentiate between simple knowledge gaps and situational execution failures:

- **Audience Context:** Mid-to-senior cross-functional managers operating in fast-paced hybrid environments, managing distributed team records and high-friction operational requests under tight deadlines.
- **Root Cause Discovery:** Prior annual compliance training tested passive rote memorization. While pass rates were high (98%), managers froze during ambiguous escalation scenarios because they lacked practical experience navigating gray-area decisions.
- **Intervention Rationale:** Static policy documentation was replaced with an interactive **branching scenario matrix** to allow leaders to practice consequence-driven decision-making in a safe, low-risk environment.

Targeted Behavioral Competencies:

- **Compliance Red Flags:** Identifying and isolating regulatory and privacy risks in real-time during complex cross-functional review processes.
- **Data Governance Protocols:** Applying exact security access tiers and data-handling protocols when routing operational documents and reports.
- **Feedback Friction & Escalation:** Resolving cross-functional feedback loops constructively while adhering strictly to regional privacy policies.

3. MEASURABLE TRAINING OBJECTIVES

By the end of this asynchronous simulation, 95% of management teams will be able to:

- Identify and isolate a data governance policy infraction within a real-world scenario in under 2 minutes.
- Execute the correct corporate feedback response loop within 3 business minutes without policy deviation.
- Mitigate organizational compliance liabilities without relying on manual supervisor interventions.

4. INSTRUCTIONAL STRATEGY & PEDAGOGICAL APPROACH

To maximize engagement and retention, this course utilizes a choice-driven **Branching Scenario Matrix**:

- **Realistic Immersion:** Instead of passively reading data rules, learners are dropped into high-friction corporate conversations and operational dilemmas.
- **Immediate Consequence Loops:** Every decision triggers an authentic consequence (e.g., immediate team pushback, audit exposure, or successful de-escalation), reinforcing cause-and-effect learning.
- **Just-in-Time Remediation:** Unsuccessful decision branches provide targeted coaching prompts with direct links back to core governance guidelines.

5. EVALUATION & MEASUREMENT STRATEGY (KIRKPATRICK ALIGNMENT)

- **Level 2 (Learning):** Scenario assessment score $\geq 85\%$ on first-attempt risk-identification decisions.
- **Level 3 (Behavior):** 30-day post-training operational audit measuring correct document routing and escalation handling in live workflows.
- **Level 4 (Results):** 20%+ reduction in escalated data governance compliance infractions across participating departments.
